Employee Cybersecurity Awareness Guide

Simple habits that reduce everyday security risk.

Email and messaging

- Verify unusual requests through a known contact method.
- Report suspicious messages instead of interacting with them.
- Do not send confidential data through unapproved channels.

Devices and updates

- Install approved updates promptly and do not disable security controls.
- Lock the screen when away and keep devices physically secure.
- Use approved software and avoid unknown USB devices.

Remote work

- Use trusted networks and the approved VPN where required.
- Prevent shoulder surfing and protect calls involving sensitive information.
- Keep work data out of personal accounts and consumer storage services.

Report early

- Report lost devices, accidental sharing and suspicious activity immediately.
- Provide clear facts without deleting messages or changing evidence.
- Early reporting helps the security team contain issues before they spread.

Use this guide with your organisation's policies and incident contacts. For urgent events, follow the approved escalation path immediately.
